

Research Plan Template

Standard Project

Title

Rationale (Problem)

A few sentences explaining the global or societal need for this research. Why does anyone care about this research.

Hypothesis/es

What is being tested.

(Suggestion: If, then format. If something is done, then something will result.)

Procedure

Sequentially numbered steps that cover the procedure from beginning to end. The steps should be detailed enough for someone else to be able to replicate the study from your steps. This section can be sub-divided by different sections of the procedure such as safety, experimentation, data analysis, disposal, etc..

Safety: These steps will vary according to the types of projects. These steps must be a part of the research plan as well as being on the Form 3. Some examples are:

PHBA: Aseptic technique, including, but not limited to, goggles, type of gloves, closed toe shoes, working conditions (BSL cabinet, etc), disposal

Hazardous chemicals or devices: Safety equipment used, including, but not limited to, (goggles, gloves, closed toe shoes), working conditions (fume hood, etc), fire extinguisher if combustion is possible.

Experimentation:

These sequential, numbered steps should continue from safety. This must thoroughly cover the entire study. Make sure to include the experimental design and data collection procedures.

PHBA: organism(s) used, attach a copy of the PO used to purchase the organism or letter from institution providing the sample(s)

Chemicals: concentration, dilution(s), disposal.

Data Analysis:

Include a description of the techniques or statistical tests that will be employed to analyze the results of the experimentation.

Disposal

This is necessary for PHBAs, chemicals or materials that require special handling for disposals.

Summary or addendum

Necessary if experimentation changed through the course of the research. If additional SRC or IRB approval was needed, you must also provide a letter from the SRC, explaining the changes which is signed and dated. If new IRB approval was necessary, the new Form 4 and informed consents must be included with the paperwork.

Bibliography

Current journal sources on your topic from your literature review.

A large, empty rectangular box with a thin black border, intended for the user to list current journal sources from their literature review. The box is currently blank.
